EDUCATION

University of Washington M.S. Information Management

09/2023 - 08/2024

University of Washington B.S. Informatics (Website Development)

09/2020 - 06/2023

SKILLS

Languages & Frontend: TypeScript, JavaScript, Java, Python, SQL, React, Next.js, HTML5, CSS3, Tailwind CSS, Sass, Chart.js, Accessibility/WCAG

Backend, Data & Cloud: Node.js, REST APIs, WebSockets, Firebase, MongoDB, MySQL, Payload CMS, AWS EC2, Microsoft Azure, Docker

Engineering: API Design, Authentication, Authorization and RBAC, Firebase Security Rules, Request Validation, Structured Logging, Jest, React Testing Library, CI/CD, Git/GitHub, Production Debugging

WORK EXPERIENCE

Software Engineer, Columbia Crossings LLC

02/2025 - 06/2026

- Built React and TypeScript product workflows for reservations, leasing, accounts, and documents, surfacing critical status information earlier and improving staff lookup speed by 66%.
- Partnered with leasing and operations staff to clarify workflow pain points, release incremental improvements, and refine reservation tools based on day-to-day usage feedback.
- Implemented role-based access with Firebase Security Rules and application-level authorization checks, restricting sensitive staff workflows according to user permissions.
- Replaced paper-based leasing agreements with an integrated DocuSeal workflow, converting complex PDF contracts into reusable HTML templates and structured field mappings to streamline customer onboarding.
- Delivered real-time reservation and account features with Firebase Firestore listeners, keeping customer-facing applications and internal dashboards synchronized throughout active workflows.
- Built Node.js REST APIs for reservation, CMS, and third-party integration flows, strengthening reliability through request validation, structured logging, and consistent error handling.
- Unified multiple company websites on a shared Next.js and Payload CMS platform with more than 20 reusable React components, enabling nontechnical teams to manage content independently while reducing duplicate engineering work.
- Shipped and supported production applications through Git-based releases, AWS EC2 configuration, post-deployment verification, and root-cause debugging across high-traffic pages and file-upload workflows.

Software Engineer (Internship), AIMHealth Innovation Lab

09/2023 - 12/2024

- Rapidly prototyped React and Next.js interfaces for an LLM-powered clinical decision-support product, translating evolving concepts into practitioner-facing symptom and diagnosis workflows.
- Built reusable Tailwind CSS components for symptom intake, supporting evidence, ranked diagnoses, loading states, and validation feedback, improving consistency across clinical review screens.
- Integrated frontend workflows with retrieval and diagnosis-ranking APIs, transforming unstructured symptom inputs into structured results that practitioners could review and interpret.
- Collaborated with researchers and developers to convert ambiguous clinical requirements into testable interface behavior, iterating as research findings and product needs evolved.

Website Developer (Internship), University of Washington Marketing and Communications

02/2024 - 08/2024

- Rebuilt a static marketing analytics dashboard as a modular React product with three analytics views and more than 30 interactive Chart.js visualizations, making campaign performance easier for university stakeholders to explore.
- Developed reusable chart components, shared data utilities, CSV ingestion, and global filtering, reducing duplicate implementation and simplifying subsequent feature development..
- Improved responsive behavior and WCAG compliance across university web properties, making interfaces more usable across screen sizes and assistive technologies.

PROJECTS

Full Stack Software Engineer, Travel Plan Customization Platform

[GitHub](#)

- Designed and deployed a full-stack React and Node.js application on Microsoft Azure that generated personalized travel itineraries through preference-based recommendation workflows.
- Built REST APIs for itinerary generation, authentication, and travel data management, using request validation and session controls to protect data integrity across frontend and backend flows.
- Added collaborative itinerary editing with WebSockets, synchronizing concurrent updates so multiple users could revise shared plans without overwriting one another's changes.
- Developed Jest and React Testing Library suites for components and interaction flows, achieving more than 90% test coverage and increasing confidence in feature changes.
